Commensurability and cross-study inference in quantitative species interaction networks

Chris Brimacombe, Carsten F. Dormann, Korryn Bodner, Leah Garvie,
Kevin Cazelles, J. Scott MacIvor, Kevin S. McCann

Additional appendix tables

This document contains Tables S1, S6, S10, and S11, which would otherwise be included in the main appendix but are archived separately because they exceed the publisher's length limits for supporting information tables.

Table S1: Modifications to the taxonomic identifiers (i.e., the string name) of nodes in networks. If a node was removed from a network, its interactions and corresponding edge weights were merged into the node with the correct taxonomic identification. Networks are classified as belonging to type pollination ("PL"), or seed-dispersal ("SD").

#	Network name	Type	Description	Effects
1	Blake_1992	SD	**Different spelling:** Psychotria psychotriifolia to Psychotria psychotrifolia	Match node name in other network(s)
2	Hovestadt_1997	SD	**Extra subspecies information:** Antiaris toxicaria var africana to Antiaris toxicaria	Match node name in other network(s)
3	Hovestadt_1997	SD	**Different spelling:** Oriolus brachyrynchus to Oriolus brachyrhynchus	Match node name in other network(s)
4	M_PL_004	PL	**Incorrect spelling:** Dialictus cressoni to Dialictus cressonii	Match node name in other network(s)
5	M_PL_006	PL	**Extra subspecies information:** Bombus terrestris lucorum to Bombus terrestris	Match node name in other network(s)
6	M_PL_006	PL	**Incorrect spelling:** Eriothrix rufomaculatus to Eriothrix rufomaculata	Match node name in other network(s)
7	M_PL_007	PL	**Extra subspecies information:** Bombus terrestris lucorum to Bombus terrestris	Match node name in other network(s)
8	M_PL_007	PL	**Incorrect spelling:** Eriothrix rufomaculatus to Eriothrix rufomaculata	Match node name in other network(s)
9	M_PL_017	PL	**Incorrect spelling:** Pyonia tithonus to Pyronia tithonus	Match node name in other network(s)
10	M_PL_017	PL	**Incorrect spelling:** Scatophaga stercoraria to Scathophaga stercoraria	Match node name in other network(s)
11	M_PL_025	PL	**Incorrect spelling:** Andrena imatrix to Andrena imitatrix	Match node name in other network(s)

Table continued . . .

Table S6: Percent differences between Patefield null models (Patefield, 1981) and empirical networks for specialization (H_2'; Blüthgen et al., 2006), nestedness (wNODF; Almeida-Neto and Ulrich, 2011), and modularity (DIRTLPAwb+; Beckett, 2016). Values represent the percent difference between each network's empirical index and the mean of its 1000 Patefield randomizations, computed as $100 \times \frac{\overline{\text{index(Patefield)}}_{1000} - \text{index(Empirical)}}{\text{index(Empirical)}}$. Positive values indicate higher values in the Patefield null models relative to empirical networks, while negative values indicate lower values. Networks are classified as belonging to type pollination ("PL"), or seed-dispersal ("SD").

Mean			**-76.28**	**88.06**	**-63.34**

Table S10: Percent differences between Váznull null models (Vázquez et al., 2007) and empirical networks for specialization (H_2'; Blüthgen et al., 2006), nestedness (wNODF; Almeida-Neto and Ulrich, 2011), and modularity (DIRTLPAwb+; Beckett, 2016). Values represent the percent difference between each network's empirical index and the mean of its 1000 `vaznull` randomizations, computed as $100 \times \frac{\overline{\text{index}(\texttt{vaznull})}_{1000} - \text{index(Empirical)}}{\text{index(Empirical)}}$. Positive values indicate higher values in the Vázquez null models relative to empirical networks, while negative values indicate lower values. Networks are classified as belonging to type pollination ("PL"), or seed-dispersal ("SD").
